

## FLEXIBLE STUD RAIL PARTS GUIDE 1

Watt Plastics Flexible Stud Rail is 108mm wide and contains 3 steel wires for extra strength. The rail attaches at end posts and slips freely through the line post brackets to allow rail flexibility. We recommend post spacings between 3 and 4m and we do not recommend straining more than 100 per run.

### Flat Connector

Attaches to the fence post allowing the stud rail to run between the post and connector. Screws supplied.

### Corner Connector

Attaches on the inside of a corner post allowing the stud rail to run between the post and connector to create a corner. Screws supplied.

### End Bracket

Attaches to an end post to be used for all starts and ends of runs fixing the stud rail in place. Screw supplied.
